

Thermoplas Nasal Splint

Nasal Splints

splints - 10 per package
Actual Size

Nasal Splint Kit

nasal splint kit - 5 kits per package

- Thermoplas is the first nasal splinting material with 100% memory, lets you undo what you have done & do it again perfectly.
- Thermoplas activates in ordinary hot tap water & needs no additional adhesives, no mess or fuss.
- Thermoplas is reasonably priced.
- Thermoplas is the first nasal splint that advances ease & patient comfort. There is no splint like it.

Direction for use:

Place into hot water of at least 135°F for 15-20 seconds. Thermoplas will become transparent & moldable. Hardening will occur within approximately 60 seconds. To remold, simply place into hot water & it will return to original shape. If the Thermoplas splint does not become transparent & moldable, your hot water heater is not set at a high enough setting. You may also heat the Thermoplas splint by placing it in a container of water & using a microwave oven.

TLS® Drainage Systems

Let the **T**iny **L**ittle **S**ucker Do BIG Things for You!

TLS Surgical Drainage System

For wound care of the extremities, the compact design of the TLS Surgical Drainage System is easily incorporated into the wound dressing and provides convenient and effective draining. This system utilizes standard 15cc evacuated blood collection tubes as reservoirs.

Packaged STERILE in a convenient tray, these kits are provided complete with radiopaque indicated, silicone catheter; trocar; protective housing; connecting adapter; and two 15cc evacuated tubes.

CAT#	DESCRIPTION
------	-------------

Kit contains: 1 Catheter, 1 Trocar, and 2 Evacuated Tubes	
-----------------------------------------------------------	--

6640	7 FR, STERILE
------	---------------

6650	10 FR, STERILE
------	----------------

6660	4mm Flat with Side Holes, STERILE
------	-----------------------------------

The QUINTUBE® Monitor Pack, consisting of five additional evacuated tubes for purposes of monitoring drainage volume and color over time are available as replacement reservoirs for the TLS Surgical Drainage System.

CAT#	DESCRIPTION
------	-------------

6630	QUINTUBE Monitor Pack, 5 Tubes/Pack, 24 Packs/Case
------	----------------------------------------------------

TLS Surgical Drainage System

TLS Bulb Drainage System

TLS Bulb Drainage System

For procedures requiring a larger reservoir, the TLS Bulb Drainage System provides an excellent alternative. These drainage systems provide gentle suction and prohibit reverse flow by relying on a 100cc silicone reservoir with an anti-reflux valve for constant, steady evacuation of postoperative fluids.

Packaged STERILE, these kits are provided complete with radiopaque indicated silicone catheter, trocar and reservoir.

CAT#	DESCRIPTION
------	-------------

Kit Contains: 1 Catheter, 1 Trocar, and 1 Reservoir	
-----------------------------------------------------	--

6646	15 FR, STERILE
------	----------------

6647	4mm Flat with Side Holes, STERILE
------	-----------------------------------

6648	10 FR, STERILE
------	----------------

6649	4mm Flat with Center Holes, STERILE
------	-------------------------------------

Individual Components	
-----------------------	--

6644	Trocar, 15 FR x 5"
------	--------------------

6653	Catheter, 15 FR
------	-----------------

6654	Silicone Bulb Reservoir, 100cc
------	--------------------------------

Ideal Kits for Hospital and Outpatient Surgical Centers

The TLS Surgical Drainage System and the TLS Bulb Drainage System are sold in sterile, convenient, complete kits consisting of a reservoir, catheter, and trocar. Both systems incorporate the small diameter silicone catheter and low profile trocars. Both systems provide positive suction drainage of fluid and tissue debris without reliance on gravity for a reduction in post operative complications and a decrease in patient healing time. The two systems permit accurate measurement and analysis of drainage fluids for optimal monitoring of both the wound and the patient.

SQUEEZE-MARK® Surgical Markers

Make Your Mark with SQUEEZE-MARK

SQUEEZE-MARK Surgical Markers

SQUEEZE-MARK Surgical Markers have a unique, patented, squeezable barrel that provides positive ink flow and a continuous marking action that allows marking over wet or prepped surfaces. The anti-rolling, ergonomic design combined with the squeezable barrel, makes SQUEEZE-MARK a popular choice among healthcare professionals.

The compact design of the SQUEEZE-MARK requires less inventory shelf space and results in less waste volume while providing the capabilities of a full length marker.

The SQUEEZE-MARK Surgical Marker is available in highly visible, scrub-resistant, gentian violet ink in both regular and micro tips. All SQUEEZE-MARK Surgical Markers are provided STERILE, packaged individually with a separate flexible ruler or adhesive ruler/labels.

CAT#	DESCRIPTION
9550	Regular Tip with Ruler, STERILE
9555	Regular Tip with Ruler/Labels, STERILE
9560	Micro Tip with Ruler, STERILE
9565	Micro Tip with Ruler/Labels, STERILE

Endo-brow Kit

Endoscope & Endoscope Sheath

Scope- 4mm x 15cm, 30 degrees, high magnification endoscope, autoclavable

Sheath- Visualization /irrigation sheath, open viewer spatula tip

Rotational Cautery Instruments

micro metzenbaum scissor, curved

micro metzenbaum scissor, straight

micro straight jaw forcep

micro dissecting forcep, full curve tip

micro hook scissor

Dissectors/Elevators

12mm broad dissector, chisel tip, curved

Periosteal elevator, 6mm oval, slight curved

Periosteal dissector, chisel tip, 7mm, slight curved

Periosteal elevator, spade end, 13mm, straight

Periosteal dissector, 7mm concave wedge, curved

Periosteal elevator 10mm, curved

3mm rounded micro dissector, slight curved

Nerve hook, tapered, curved

10mm round dissector, downturn tip, slight S-curve

Upturn tip, delicate dissector, slight S-curve

A fully comprehensive endoplastic instrument set provided in a briefcase carrying case.

Set includes: A 30 degree endoscope and a fenestrated sheath; this shields the tissue while allowing full visualization and retraction. Includes built-in suction and irrigation port.

Five cautery handled, fully rotational instruments to adapt to left and right use without requiring separate instruments.

Ten of the most popular dissectors/elevators allowing for diverse choice and flexibility.

Significantly more cost effective than individual item purchases. This kit provides more than you need for far less than you would imagine.
